

The Spread the Word workshop explores the unique issues surrounding co-infection of Hepatitis and HIV.

This fun and informative workshop examines hepatitis A, B, and C, and HIV/AIDS—including transmission methods, testing processes, treatment options, and the issues which arise from co-infection.

Spread the Word workshops can also be tailored to include additional modules, created to address specific concerns of targeted populations (current/former IV drug users, men who have sex with men, and people living with HIV).

This workshop is adaptable to suit various populations. Possible venues include community organizations, businesses, government organizations, or other organizations/groups with an interest in Hepatitis.

Ideally, the Spread the Word workshop is delivered to a group of eight to thirty participants.

This workshop is designed to run approximately two hours (or approximately three hours with one of the additional modules).

Fees for the Spread the Word workshop are negotiable. Please contact HepNS for pricing and availability.
